MINUUM PRODUCT SPECIFICATIONS

Platform Support

Google Android currently provides the only ecosystem that allows alternative keyboards, so Minuum is being developed for sale to end-users through the Google Play Store. Minuum requires Android Gingerbread (2.3) or higher.

Since Apple's restrictions on iOS do not allow users to replace the default keyboard, iOS app developers can adapt Minuum to include as the native keyboard in their software.

Original equipment manufacturers (OEMs) of touchscreen devices using Android and other operating systems (for example, Windows Mobile, BlackBerry) can also license Minuum technology.

Language Support

Initial support is for English only. Minuum is extensible beyond the 26 characters of the English alphabet and can accommodate any language based on the Latin alphabet, plus punctuation, numbering, symbols, emoticons, or other inputs.
